

LOPO Flexible Cladding

LOPO flexible cladding products can vividly and realistically reproduce the natural textures and colors of various stones, clay bricks, architectural concrete, timber etc. However, unlike traditional brick work or masonry, they are incredibly flexible, thin, lightweight, allowing them to be installed easily on almost any substrate. They are ideal cladding material that offer flexible application and design features for both exterior facade and interior decor.

LOPO flexible claddings are almost mineral-based, consisting of a mixture of assorted quartz sands, high-grade polymer and inorganic pigment. An additional reinforced fiberglass mesh is used when manufacturing big format products like flexible stone veneer. The Max size of our cladding product is 1200mmx2400mm.

Features:

Flexible and Bendable
Can Be Applied On Different Surface

Thin and Light Weight
2-5mm, 3-6 KG/SQM

Natural Shades and Textures
Can Be Customized

Fire rated to A2- S1, d0, t0

High Impact Resistant
Better Than Ceramic Tile and Stone

Weather Resistant and UV Resistant
Passed 2000-hour Test

Benefits:

1. Low Costs. Faster and Easier Installation Than Traditional Masonry

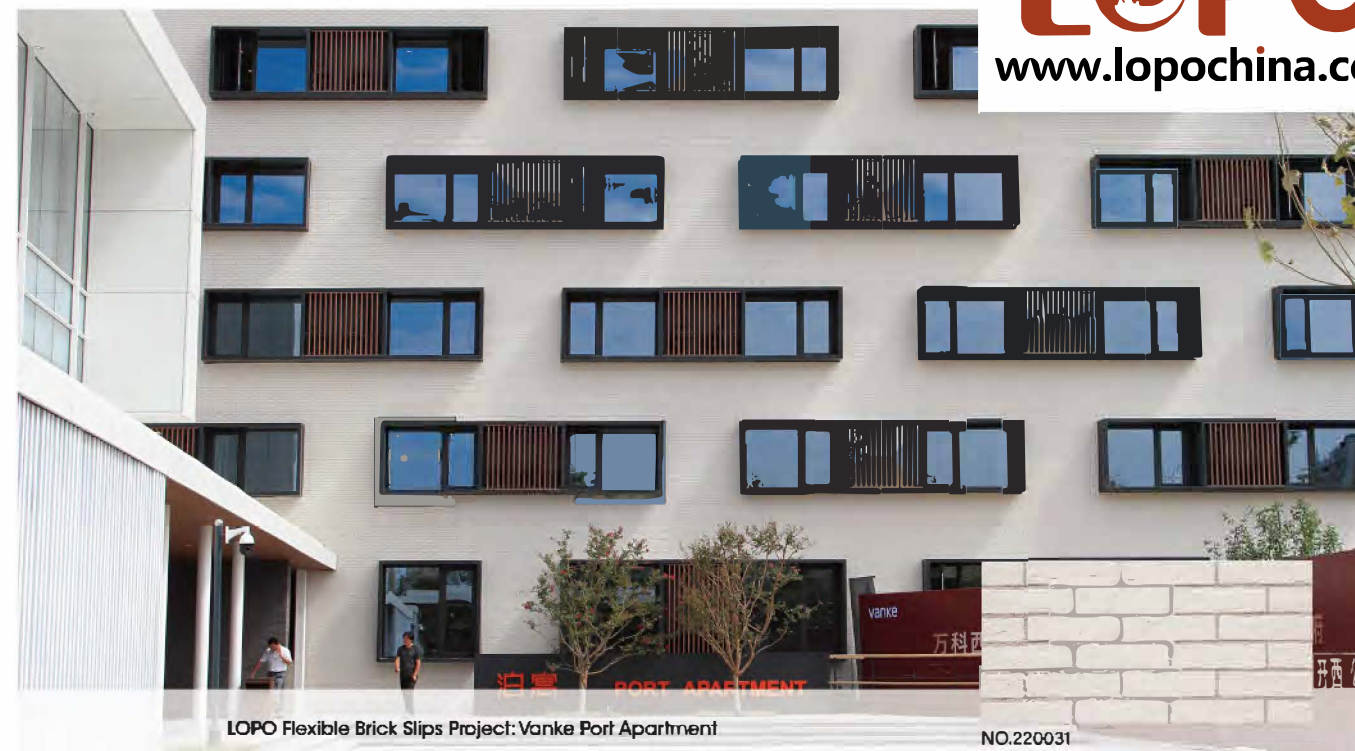

LOPO flexible cladding products is cost-effective. Low cost of material; Low transportation and storage cost; Highly efficient in installation. No special tools are required. DIY friendly Products.

2. Applicable for Different Substrate

Flexibility and lightweight make LOPO flexible claddings bond firmly and sustain the deformation of different substrates, without any hollowness, breakage or fall-off.

3. Safer Products for High Rise Blocks

Compared to traditional ceramic tile and stone, the features of thin, light weight and flexible make flexible bricks and flexible stone veneers a good option for cladding the high-rise blocks.
